

## **Value Pathways powered by NCCN and Clear Value Plus**

**Successful collaboration  
with payers begins with a  
successful quality program.**

Private payers and the Centers for Medicare and Medicaid Services (CMS) are increasingly interested in evidence demonstrating greater consistency of cancer care and predictability of costs. Value Pathways powered by NCCN, only available through Clear Value Plus software, aim to help your practice provide the highest quality treatment to your patients and efficiently document delivery of consistent, evidence-based care.

Our solution for a successful quality program consists of two components—the transparent, evidence-based clinical content of Value Pathways powered by NCCN, and Clear Value Plus, software which allows physicians to assess treatment options of both Value Pathways and NCCN Clinical Practice Guidelines® in Oncology (NCCN Guidelines®) at the point of care.

Developed by physicians, Value Pathways powered by NCCN are 100% concordant with NCCN Guidelines and continually updated as new evidence becomes available. In addition, Value Pathways build upon Level I Pathways, created by The US Oncology Network, and can aid your practice's financial health by rewarding you for making evidence-based treatment choices. Level I Pathways have demonstrated<sup>1,2</sup>:

- Lower treatment costs with no observable difference in overall survival
- Lower rates of chemotherapy-related hospital admissions

**Level I Pathways have also demonstrated benefits for patients, including:**

- Shorter duration of therapy
- Lower frequency of chemotherapy infusion visits
- Lower frequency of non-chemotherapy agents

**Whether used in conjunction with a value-based reimbursement program or to demonstrate to payers your use of NCCN Guidelines in patient care, Clear Value Plus:**

- Easy access to industry-leading, evidence-based clinical pathways and guidelines at the point of care
- Automatic updates to guidelines and pathways as additional clinical evidence becomes available with no user effort
- Real-time reporting to demonstrate quality, including adherence to guidelines and pathways, regimen utilization history and program participation—for an individual provider, a single site or across the entire practice
- The ability to identify critical data missing from patient records, helping physicians strengthen the quality of care
- Automatically confirm on-guideline and on-pathway regimen selections, minimizing the burden of documentation for prior authorization or quality reporting
