## 3.0.31 Release Notes

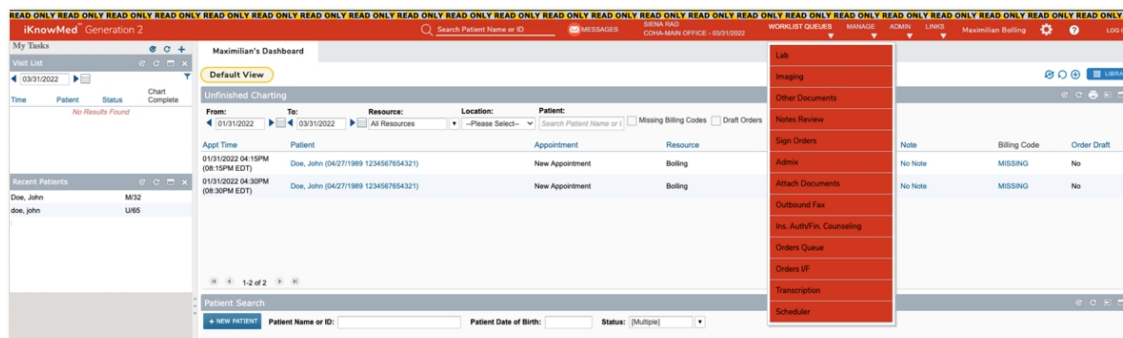

May 2022

iKnowMed Generation 2 version 3.0.31 includes quality of life updates to ordering and substantial improvements to clinical note workflows. Additionally, there are numerous fixes and resolutions.

### Enhanced visual cues for the Read Only environment

To help visually differentiate the Read Only environment from production, users will see a new **Read Only** ticker above the top navigation bar. The top navigation bar itself and drop-down menu items will also be red instead of blue.

These updates give users a better visual indication they are viewing the Read Only database, which will help decrease the risk of entering data in the Read Only environment.

### Simplified medication ordering reducing and clarifying errors

It is frustrating to constantly deal with unpredictable quirks when ordering medications. In version 3.0.31, we introduced the following updates that decrease this frustration by reducing clicks and rework:

- When selecting the instructions option, the system retains the entries in the dispense quantity and dispense unit fields rather than removing data from them.

- There will be fewer instances where updating the frequency, dispense quantity, and duration fields cause information in other fields to be removed.
- Updating the frequency field no longer clears the dispense quantity and dispense unit fields.
- Automatic calculation of dispense quantity only occurs when the duration field is completed and the frequency can be quantified, such as daily, twice a day, or after meals. In the case of after meals, the system assumes three meals per day unless otherwise noted. If the frequency cannot be quantified (i.e., as directed), the system will not automatically update or clear the dispense field when the frequency is updated. This will again result in fewer error messages.

## Effortlessly transfer notes to another provider

The **Notes Review** queue now supports the ability to transfer notes from one provider to another like the other worklist queues.

If transferring more than one note, check the appropriate notes from the queue then click the new **TRANSFER SELECTED** button at the bottom of the left column (see callout 1).

If transferring only one note, check the appropriate note from the queue then click the new **TRANSFER** button at the bottom of the right column (see callout 2).

The screenshot displays the iKnowMed interface with the 'Notes Review' queue selected. The left pane shows a list of notes with columns for Patient (Gender/Age - DOB - MRN), Note Name, Note Status, Document Author, Date, and Fax Needed. A table of notes is visible, including entries for 'Turtle, Madeline', 'McGuillicutty, Luc', 'Connecticut, John', 'ZZBryant3, LaPac', 'Flower, Basil M/4', 'Feritta, Joan F/81', 'Robinson, ZZhai', 'Connecticut, John', 'Connecticut, John', 'Connecticut, STEI', 'Planchard, Thirte', 'Flower, Azalea F/2', and 'McGuillicutty, Luc'. The right pane shows the patient record for 'Flower, Basil M/4 - 07/07/1977 - zzflowerbasil'. The patient's principal diagnosis is 'Cancer risk assessment'. The right pane also shows the patient's medical history, including 'Prostate cancer (Stage Date: 03/01/2020, Stage IIB-Pathological)' and 'GOUT'. At the bottom of the interface, there are buttons for 'TRANSFER SELECTED' (callout 1) and 'TRANSFER' (callout 2).

## Assign Copy Forward Recipients preference to multiple templates at once

In iKnowMed Generation 2 version 3.0.28, we introduced a feature to save providers a step by automatically adding recipients from the most recently sent note to the current note. However, this feature had to be turned on individually for each clinical note template. Now, we made an update to this feature that your staff and managers of your EMR will greatly appreciate.

Users can assign the **Copy Forward Recipients** feature to multiple templates at once simply by:

- Checking the box next to the name of each template (see callout 1).
- Turning on the **Copy Forward Recipients** preference and clicking the Update button (see callout 2).

Users can confirm that the action was successful by viewing the **Copy Forward Recipients** column on the page (see callout 3). This column provides a visual indication of which templates have this feature turned on.

## Comply with 21CFR regulations when amending notes

To ensure the trustworthiness and reliability of electronic records per regulations dictated by the federal government, we will require providers to choose a reason for amending an already signed note in the Documents tab (see callout 1).

**Amend note 1**

Select a reason for amending:

- ☐ Original note was in wrong chart
- ☐ Wrong date of service
- ☐ Correction
- ☐ Retraction
- ☐ Late entry
- ☐ Other:  50 characters maximum

**CANCEL** **NEXT**

The amendment will display in the audit history with the selected reason (see callout 2).

**NOTE:** While this feature is present when amending signed notes in the **Documents** tab, it does not apply when editing notes in the **Notes Review** queue.

**Document Audit History - Joan Applegate (81/F)**

## Proper location prints on Results reports

Results reports now print with the name, address, and phone number of the clinic location that the user is logged into instead of that of the practice. If the user has not selected or defaulted to a location upon login, the practice information will print on the report instead.

## Additional Enhancements (A-Z)

Location (A-Z)	Details
Documents tab	<ul style="list-style-type: none"> <li>The <b>Last Updated</b> column under the <b>Drafts</b> tab displays the time zone to align with the <b>Date of Service</b> column.</li> <li>In a previous release, we introduced a feature to help providers select note reviewer(s) more easily for patients with multiple attendings. In iKnowMed Generation 2 version 3.0.31, we extended this feature to include note amendments.</li> </ul>
My Tasks > Worklist Summary	Before this release, several practices reported loading issues with the <b>Worklist Summary</b> widget, including missing queues or queue counts. In version 3.0.31, we removed the <b>Unattached Documents</b> , <b>Ins. Auth/Fin. Counseling</b> , and <b>Transcription</b> items from the widget to correct the loading issues and make the widget more provider focused.
Worklist Queues > Attach Documents	<ul style="list-style-type: none"> <li>The queue no longer includes inactive providers as an option when assigning documents to a reviewer. This update prevents attachments from going to the wrong provider for review. Any provider set to inactive no longer displays in the search results.</li> <li>The <b>Audit Report</b> only includes information on attached documents. It now excludes information on any clinical notes created in iKnowMed Generation 2.</li> </ul>

## Fixed Defects (A-Z)

Location (A-Z)	Details
Audit History	Before this release, the system did not retain the full audit history for changes made to the <b>Perform Date</b> and <b>Perform Location</b> in the <b>Orders Queue</b> or

Location (A-Z)	Details
	<p><b>Orders I/F</b> across the EHR. This defect is fixed and now the audit histories display all changes as expected.</p>
Clinical Profile > Problems	<ul style="list-style-type: none"> <li>• The <b>Problems List</b> displays the patient's most recently updated principal diagnosis at the top of the list, even if it's not the most recent diagnosis.</li> <li>• The buttons throughout the <b>Problems</b> tab appear outside of the columns on their own line when adding or editing a problem.</li> <li>• The <b>Audit History</b> collects and displays information regarding changes to a problem faster than before.</li> <li>• Problems migrated from iKnowMed EHR to iKnowMed Generation 2 with only an ICD-10 code can be edited to select the appropriate problem or set to inactive as needed.</li> </ul>
Documents tab	<ul style="list-style-type: none"> <li>• Patient's date of birth (DOB) and Medical Record Number (MRN) now display when printing or faxing clinical notes created in iKnowMed Generation 2. The DOB and MRN will be visible starting on page two and beyond.</li> <li>• Before this release, providers billing in this tab reported that the system selected the wrong appointment for patients with multiple appointments on the same day. We improved the logic for appointment selection, and now the system selects the appointment based on the user's role, the appointment resource, and appointment type. This enhancement allows providers to confidently add billing items to the correct appointment in the <b>Documents</b> tab.</li> </ul>
Message Center	<p>Before this release, users reported that taking actions such as responding to, forwarding, or composing a message or switching folders lost their previously selected sort orders for <b>Inbox</b>, <b>Draft</b>, <b>Sent</b>, and <b>Archived folders</b>. This is now fixed, and users can select and retain a sort order for these folders as</p>

Location (A-Z)	Details
	expected.
Orders tab	We fixed the issue that displayed an error message and broke the working session for some users when removing orders from the <b>Drafts</b> tab.
Patient Portals	<ul style="list-style-type: none"> <li>Patients can now view results attachments initially withheld from the patient's view and later reviewed by their provider in the Navigating Cancer patient portal.</li> <li>Lab result documents migrated from iKnowMed EHR to iKnowMed Generation 2, and not previously marked as reviewed, are now viewable in the Navigating Care and My Care Plus patient portals.</li> </ul>
Regimen > Issue Rx today	<b>Issue Rx today</b> in the <b>Flowsheet</b> was not defaulting specified medications to the Medically Integrated Dispensary (MID) for consented patients as expected when selecting the option in a regimen prescription order. This is fixed, and now the <b>Rx editor</b> will default to the MID if appropriate.
Worklist Queues > Unified Sign Queue	We fixed an issue in the queue that caused patients to disappear from the left column after transferring their items to another provider. Now patients will remain in the column as expected.
